OUTCOME

The excursion of the students was being conducted as a part of Curriculum of Geography Hons under Calcutta University. The students learnt to conduct primary survey and collect primary data from the field survey. In post field work session they learnt how to tabulate the primary data and to represent the tabulated data by different Cartographic Techniques. On the basis of such data they studied how to analyse different socio-economic aspects of the people and livelihood of the selected study area. They also learnt to co-relate physical features with socio-economic features. By observation and study they evaluated and proposed different suggestive measures for further development and prospect of the society.
